Moncure Megasite Sewer Extension

Freese and Nichols, Inc.

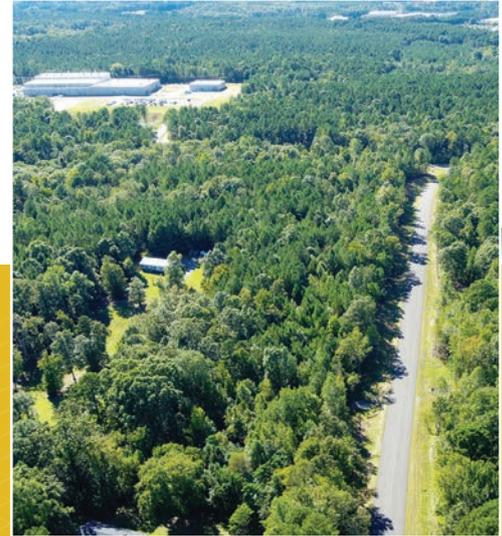

MONCURE MEGASITE SEWER EXTENSION
Sanford, North Carolina

The Moncure Megasite, an undeveloped industrial site in Chatham County, had all the infrastructure needed to become certified through the Economic Development Partnership of North Carolina's (EDPNC) Certified Site Program, except for one thing. The site was lacking wastewater service. To become certified and attract future development, industrial sites must undergo a rigorous prequalification process to meet a consistent set of standards. Through extensive stakeholder coordination and innovative design and bidding processes, Freese and Nichols (FNI) helped provide the last piece of the puzzle to position the Megasite as the region's next large-scale industrial facility.

Project Forge

WithersRavenel
PROJECT FORGE
Sanford, North Carolina

WithersRavenel was the primary engineering consultant for the City of Sanford on Project Forge, a large economic development site project. WithersRavenel led the due diligence efforts during the site selection process. In two weeks, the team assembled boundary surveys, wetland delineations, preliminary geotechnical investigations and a Phase I ESA for the 98-acre property. WithersRavenel collaborated with the City to create development strategies for the tight project schedule. Subsequently, WithersRavenel worked with Sanford Contractors on a design/build contract to deliver site grading and access to the site. WithersRavenel's services included surveying, site design, permitting and funding administrative services for the project.
